Recognize and cluster media with matching faces. Griffeye Newsletter - Open in web browser.

Analyze 17.0 - Phase One

What if you could recognize and cluster media with matching faces? Well, that is one of the major things on the wish list that you have given us. Does this person appear somewhere else in the database? And do we know who the person standing next to him or her is?

Well, we have great news. We kickstart 2017 with the release of Analyze 17.0.0 with the possibility for our CS users to add face recognition. Technology integration with NEC NeoFace Facial Recognition not only means you can seamlessly use state-of-the-art face recognition in Analyze, you can also leverage other tools within the Analyze suite to enrich it with more information and knowledge to build a better workflow.

The NEC NeoFace integration is the first step of many more as we work to improve and enhance face recognition in the Analyze tool. It is also the first step in a long row of great new features waiting to be revealed in 2017. This is 17.0 – Phase One and we can't wait to

tell you what's next!
